

CYBER SECURITY HYGIENE CHECKLIST

Is your company implementing the fundamental best practices when it comes to cyber hygiene? Use the checklist below to determine which areas need improvement in order to protect your company from a data breach.

- We scan our network and servers for vulnerabilities.
- We patch our equipment inline with vendor updates.
- We regularly perform network failover and availability tests.
- We proactively monitor network performance and security.
- We review and analyze historical data and trends.
- We use network optimization and security tools.
- We can manage our network optimization and security tools.
- We've established a set network and security coverage schedule.
- We monitor threat intelligence.
- We have, and follow, a cyber security program and plan.

Each of these proactive measures take time to properly manage and maintain; it's understandable if you cannot do it alone. If you need advice on how to do any of the above steps, please reach out to us for free consultation.
